HERE ARE SOME OF THE HOSTS OZLINK HAS INTEGRATED WITH:

What Are Business Rules?

Business rules are defined to streamline how a shipment is handled. With OzLINK business rules can operate on any of the attributes of a shipment including value, destination, weight, etc. Business rules are customer specific and are used to streamline fulfillment and reduce errors.

One example is selecting the correct UPS service based on weight and destination. For example shipments under 4lbs going to a residential address should be shipped SurePost, whereas heavier shipments should go UPS Ground.

Another example of a business rule might state that if a package is being delivered to a zip code in an urban area where it might not be feasible to leave it at the door. In such a case a business rule requiring a signature could be applied.

OzLINK can include any of your unique business rules right in to the integration process.
